

EACLN Connection rings

Description

The collar with overlap is made of Zinc coated (EACLN) or AISI 304BA stainless steel (EACLN-X). This article is used for joining pipes in suction systems.

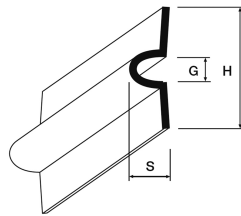

Characteristics

Material : galvanized steel / stainless steel
304 BA with 5/10 thickness.

Use

The EACLN ring is used for connection and clamping between two pipes in single-wall systems.

It features a clamp-type fastening/closing system with a U-bolt and fully threaded screw with screwdriver slot, allowing secure tightening of the band around the flue duct.
