

EANG Galvanized tapes

Description

EANG suspension bands provide professional-grade support solutions for HVAC installations, combining exceptional versatility with reliable performance.

These perforated steel bands are specifically designed for suspending ventilation ducts, piping, and auxiliary equipment in commercial and industrial building systems.

Characteristics

Material: galvanized steel;

Holes: Ø 8.5 mm and Ø 4.2 mm;

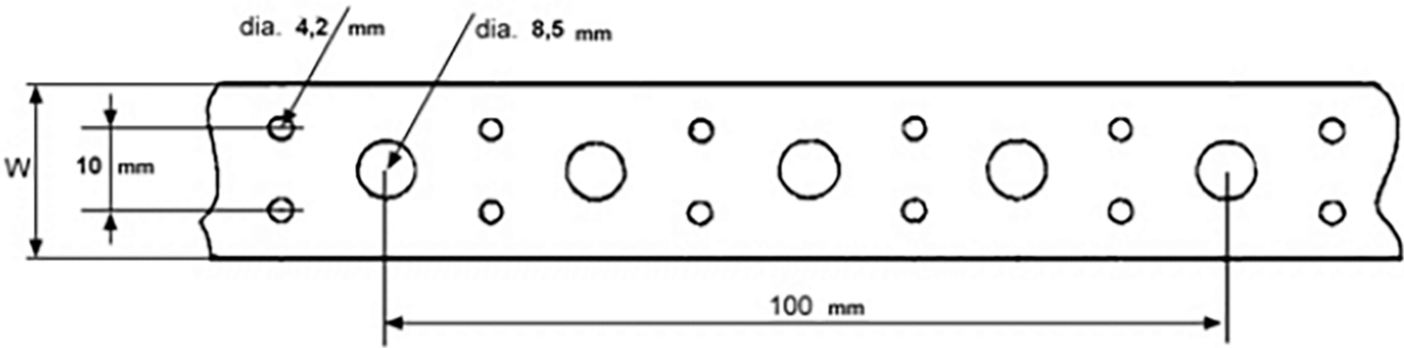

Compatible with M6, M8, and M10 bolts, screws, and rivets for maximum installation flexibility;

Load capacity from 105 kg to 260 kg depending on configuration.

Use

Ideal for professional HVAC installers, mechanical engineers, and facility managers requiring reliable suspension solutions for ductwork, piping systems, cable management, and mechanical equipment installations.

The complete range ensures optimal selection for both light residential applications and heavy-duty commercial installations.
