

ETSTS 45° air exhaust terminal with mesh

Description

The ETSTS discharge terminal is designed for air exhaust to the outside in ventilation, air conditioning, and air handling systems. Its special 45° angled outlet promotes proper air dispersion, reducing the risk of backflow and preventing rainwater from entering the ductwork.

The integrated protective mesh prevents birds, insects, and foreign objects from entering, helping to ensure the long-term efficiency and safe operation of the system.

Features

Made of galvanized steel.
Terminal with 45° angled outlet.
Integrated 12 × 12 mm protective mesh.
High resistance to weather conditions.
Robust and durable construction.
Simple and quick installation.
Compatible with standard circular duct systems.

On demand

- 45° stainless steel exhaust pipe with stainless steel mesh.
- 45° exhaust pipe size from 800 mm to 1250 mm.

Technical Features

All measure are expressed in mm.
