

EVEI Ducted helicoidal fans with "UNEL-MEC" motor

Description

EVEI line is suitable when large air capacities with relatively low pressures are required in duct mounted applications. For instance: ventilation and conditioning in naval and mining applications, evaporative towers, heat exchangers, cooling of electric and refrigerating equipments, etc. With this line is possible to attain higher pressures using the multistage version consisting of two single stages fans mounted in series, with contra-rotating impellers. This solution allows the recovery of the air rotative component turning it in pressure, developing up to 2.7 times the pressure of a single fan having the same geometry and speed. This line consists of 15 sizes with impeller diameter from 310 up to 1600 mm.

Caratteristiche

EVEI line is characterised by the extreme sturdiness of construction, thanks to the flanges directly bended on the casing, and the thickness of the materials. The variety of versions and models allows the solution of most of the problems of ventilation. Impeller consists of a strong hub, in die-cast aluminum alloy for the fixing of the blades. Available in different materials suitable for heavy duties. Casing in steel sheet protected with epoxy painting. Fixing flanges according to UNI- ISO 6580/EUROVENT 1-2 standards. Impeller with high efficiency airfoil blades in plastic material or in die-cast aluminum alloy. Hub in die-cast aluminum alloy. Balancing according to UNI ISO 1940. Variable pitch angle in still position. Asynchronous electric motor, protection IP 55, class F insulated, form B3, service S1 construction according to the IEC/EEC (UNEL-MEC) standard. Arrangement 4 (impeller directly coupled to motor shaft). Conveyed air: clean, not abrasive. Temperature of conveyed air: -20°C/+50°C. Voltage: three phase version (T) 400V-3Ph. Single phase version (M) 230V-1Ph. Frequency: 50Hz. Air flow from motor to impeller.

Versions

- Medium Case: motor / impeller unit almost completely included in the case length;
- Long Case: motor / impeller unit completely "included" in the case length.

Accessories

- Inlet nozzle.
- Silencers.
- Flat protection grid and conic (Necessary for use in free air).
- Inspection door.
- Flexible connection.
- Antivibration mounts.
- Counter flange.
- Outer terminal box.
- Fixing feet.
- Service switch.

On request

- Performance other than represented
- Versions with impeller with aluminum blades
- Versions with "actually" reversible air flow
- Atex versions
- Multistage versions
- Versions for smoke fumes
- Versions with conveyor in stainless steel or aluminum or hot galvanized sheet.
- Versions with air flow from impeller to motor.
- Prices for single-phase, 4-pole version available on request (models: 31A, 35A, 40A, 40B, 45A).

All dimensions are expressed in mm.

*Indicative.

Performances

Le prestazioni indicate si riferiscono ad aria alla temperatura di 15°C ed all'altitudine di 0 mt s.l.m., e sono state ottenute in assenza di reti e accessori.
Tolleranze: prestazioni aerauliche e rumorosità rientrano nelle tolleranze indicate nella norma DIN 24166, Classe 2.
-Le prestazioni di portata aria riportata nelle tabelle si riferiscono ad una perdita di carico pari a 0 Pa.
* Solo per installazione extra U.E
