

ADJUSTABLE CONE DIFFUSER

Serie EDRA / EDRA-PQ

High-induction circular diffuser with adjustable cones made up of concentric truncated cone profiles (available also for EDRA-PQ on squared panel, suitable for false ceiling 600x600 installation). Micrometric cone position adjusting allow to modify air throw direction according to thermal conditions and environment needs.

FEATURES

- Material: aluminium and steel
- Standard finishing: epoxy powder coating Ral9010 resistant to impact and abrasion
- Fixing: by means of screws positioned on the diffuser neck
- Installation High: from 2,7 to 6 m

POSSIBLE EXECUTIONS

- EDRA circular diffusers with adjustable cones
- EDRA-PQ circular diffusers with adjustable cones on square panel 595x595 mm

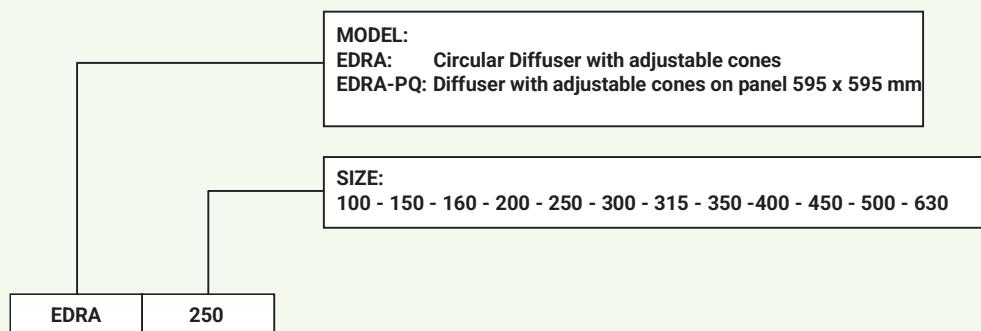

USE

For supply and return.

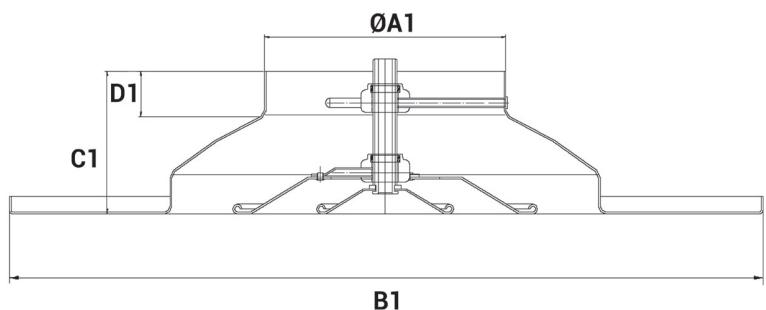

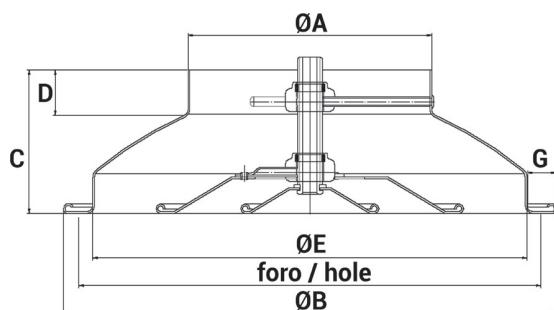

ACCESSORIES

- EPZ-DC galvanised plenum box;
- EPI-DC insulated plenum box;
- SD volume control damper;
- EQUA equalizer;
- Kit clips for fixing.

Vk [m/s] Effective Air Speed

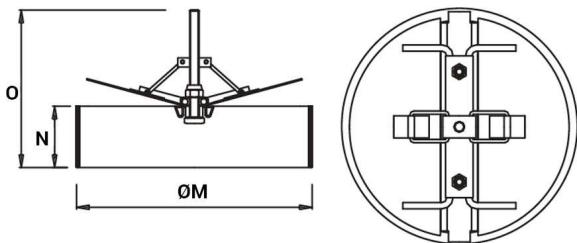

Q [m³/h]: airvolume

Pa: pressure drop in Pa

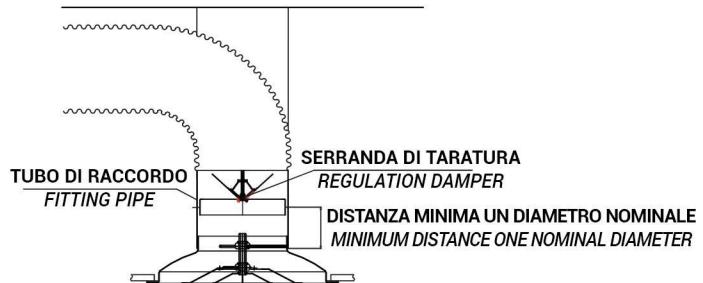

L(m): airflow distance with terminal air speed 0,25 m/s.

dB(A): weighted sound power level

BUTTERFLY DAMPER SD:

INSTALLAZIONE DEL DIFFUSORE CON TUBO FLESSIBILE
INSTALLING THE DIFFUSER WITH FLEXIBLE DUCT

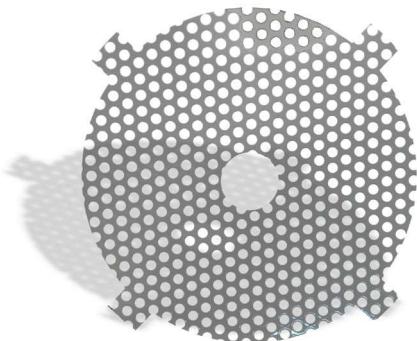

- Material: steel
- Finishing: galvanised
- Fixing: with screws on diffuser neck or to duct
- SD butterfly damper is suitable for mounting upstream of the circular diffusers, is made of galvanized steel and is complete with a robust opening/closing mechanism to avoid vibrations and noise when the air passes.
- Simple Installation, adjustments and maintenance.
- The damper located on the top of the diffuser is adjusted by acting on the adjustment screw, through the hole on the threaded rod of the diffuser.

EQUALIZER EQUA

The equalizer is an accessory to fragment the air and distribute it equally at the exit from diffuser face.

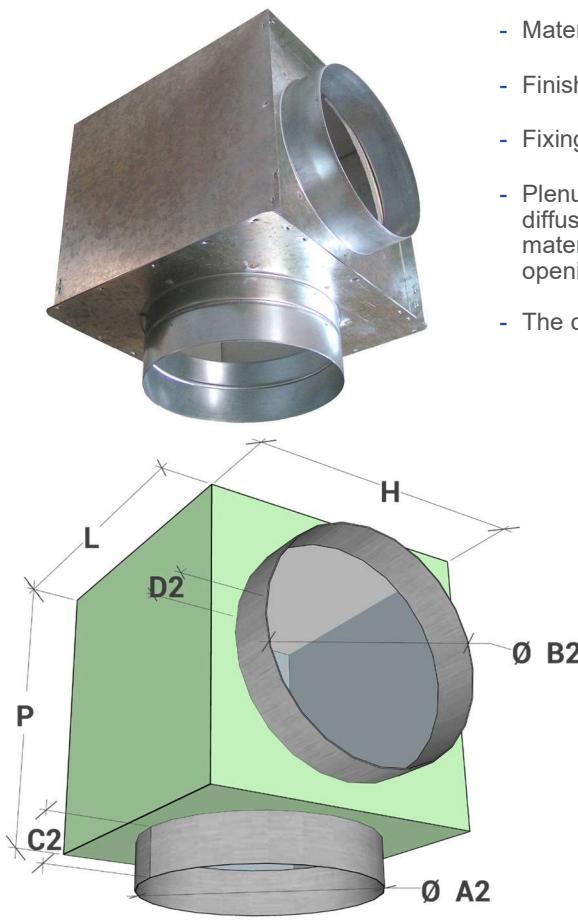

FIXING CLIPS

Fixing clips for installation on plasterboard false ceilings or rigid false ceilings (3 pieces per pack).

PLENUM BOX EPZ-DC EPI-DC

- Material: steel
- Finishing: galvanised
- Fixing: with screws on diffuser neck or to duct
- Plenum box for EDRA is suitable for mounting on adjustable circular cone diffusers. It is made of galvanized steel and can be covered with insulating material. It can be equipped with equalizer and volume damper with opening and closing lever.
- The damper located into plenum box is adjusted through a lever.

TENDER SPECIFICATION

EDRA are high induction circular diffuser with adjustable cones made up of concentric truncated cone profiles (EDRA-PQ version on a square panel is also available, suitable for installation on false ceilings with 595x595 panels). The micrometric adjustment of the position of the central cones using a screw allows to modify the direction of the airflow according to the required thermal conditions.

INSTALLATION HEIGHT: from 2.7 to 6 m.

MOUNTING INSTRUCTION:

Installation, adjustments and maintenance are simple to perform. The intermediate cones are easily extractable by rotating the hollow threaded central pin. The adjustment of on-demand damper located on the top of the diffuser occurs by acting on the adjustment screw, through the hole on the threaded rod of the diffuser. Ceiling fixing is carried out using screws from the neck of the diffuser.

Central cone adjustment in wide open position: optimal position in cooling conditions to have the greatest horizontal diffusion radius without creating discomfort in the occupied area in rooms with an ideal height between 3 and 4 m. With this configuration you have the best conditions for pressure drop, speed and sound level. The maximum temperature difference (DT) between the ambient air and the air coming out of the diffuser to obtain optimal induction conditions is 12°C.

Central cone in compact position: optimal position for particularly high rooms, up to 6 m and in heating conditions as a vertical launch is obtained which opposes the convective motion of the air in the room.

MONTAGGIO CON CANOTTO DI RACCORDO E SERRANDA A FARFALLA

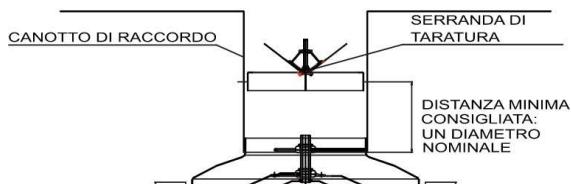

FIG. 1

Picture 1 Installation with butterfly damper

- mount the damper on the connecting duct maintaining, if possible, a distance from the diffuser equal to a nominal diameter and in any case not less than 5 cm;
- unscrew the central cones from the diffuser and fix the external cone on the fitting;
- adjust the internal cones according to the desired diffusion parameters;
- adjust the damper using the central hole on the threaded rod of the diffuser.

MONTAGGIO CON TUBO FLESSIBILE E SERRANDA A FARFALLA

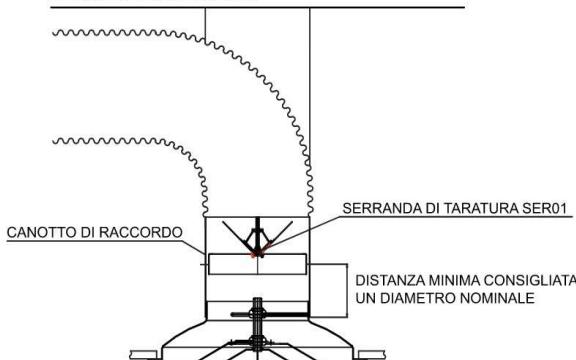

FIG. 2

Picture 2 Fig. Mounting on flexible duct with butterfly damper

- hang the diffuser from the ceiling or fix it on the false ceiling;
- fix the damper on the connecting tube;
- apply the connecting tube inside the diffuser;
- insert the flexible duct onto the connection sleeve and secure it with a clamp.
