

EPSP Plenum box in molded polystyrene

Description

Plenum box made of molded polystyrene with a density of 45 kg/mc, class 1 fireproof and internally crystallized. The transformation process combines the characteristics of the material to make the plenum a compact and light.

Features

These peculiarities, combined with the trapezoidal shape that characterizes it, allow it to be laid when the tiled false ceiling is completed, thus facilitating both the construction and maintenance of the system. The plenum has an excellent thermo-acoustic insulation, therefore, it does not require the application of further insulating materials.

Installation

Thanks to its lightness, the plenum box is laid on the structure of the false ceiling, eliminating the need of suspensions for fixing it to the ceiling.

This gives a significative advantage of reducing assembly times and saving the space occupied by over 50% compared to a traditional plenum.

Use

Designed for use with diffusers made on panels with nominal dimensions 300x300, 400x400, 500x500 and 600x600. The plenum is supplied without the hose connection.

On demand

Damper on the fitting complete with control lever for flow adjustment and equaliser.

Dimensions

Model	Mountable connections ØN			Dimensions (mm)		
	ØN1	ØN2	ØN3	E	F	H
EPSP 300x300	125	160		290	181	225
